

Muhammad Aliyan

Android Developer | Software Engineer

Sargodha, Pakistan | aliyantarar4@gmail.com | +923412202875 | GitHub: github.com/ali786-c

LinkedIn: linkedin.com/in/muhammad-aliyan-dev

PROFESSIONAL SUMMARY

Result-oriented Android Developer with proven experience in building scalable Android applications and integrating AI solutions. Skilled in API integration and local database management, with a track record of delivering high-quality mobile solutions. Eager to leverage technical expertise to contribute to impactful software projects.

EDUCATION

Bachelor of Software Engineering

University of Sargodha, Pakistan

GPA: 3.6 (Current)

6th Semester

Fsc Pre engineering

Superior College Sargodha, Pakistan

Marks: 911

Graduated: 2023

Matric Computer Science

Govt. High School Sargodha, Pakistan

Marks: 1076

Graduated: 2021

Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Database Systems, Software Engineering, Mobile Application Development

SKILLS

- Languages:** Kotlin, JSON, Dart
- Frameworks & Libraries:** Android SDK, MVVM Architecture, Retrofit, Room Database, Navigation Component, ViewBinding, Material Design, flutter
- Tools:** Git, GitHub, Android Studio, Gemini AI Integration
- Soft Skills:** Communication, Problem-Solving, Team Collaboration, Time Management, Adaptability

WORK EXPERIENCE

Fiverr (Freelance)

May 2025 – Present

- Achieved Level One Seller status with 13+ successful projects completed.
- Maintained a high client satisfaction rate of 4.9/5.0 by consistently delivering high-quality, bug-free Android applications.
- Collaborated with international clients to translate business requirements into functional, responsive mobile solutions.
- Proficient in managing project timelines and communication to ensure timely delivery and client retention.

PROFESSIONAL DEVELOPMENT

June 2025 – Present

- Actively learning Android application development.
- Developed multiple personal projects to strengthen practical skills in mobile app development.
- Gained hands-on experience in user interface design, activity lifecycle management, navigation, data handling, and app architecture.

PROJECTS

AI Keyboard Application

Stack: Mobile App Development, State Management, MVVM Architecture

- Engineered a mobile keyboard solution featuring deep integration with the Gemini AI engine.
- Developed intelligent predictive text capabilities and automated assistance for user responses.
- Built a streamlined user interface that supports real-time artificial intelligence interactions.
- Successfully integrated Gemini API to improve response performance.
- Repository available at: github.com/ali786-c/keyboardapp

Weather Forecasting App

Stack: Mobile App Development, REST APIs, HTTP Client, Asynchronous Programming, MVVM Architecture

- Created a software application providing users with instantaneous local weather data updates.
- Managed external data fetching by integrating RESTful APIs through the Retrofit library.
- Designed displays for essential metrics like temperature, atmospheric humidity, and current sky conditions.
- Source code: github.com/ali786-c/WeatherApp

Birthday Greetings Manager

Stack: Mobile App Development, SQLite/Local Database, State Management

- Produced a notification-based tool for tracking birthdays utilizing persistent local storage.
- Implemented efficient data management using the Room Database framework for Android.
- Optimized the management of personal records and integrated automated reminder systems.

Restaurant Discovery Portal

Stack: Mobile App Development, REST APIs, JSON Parsing, Responsive UI/UX

- Architected a comprehensive restaurant discovery platform using MVVM architecture and Retrofit for network calls. Implemented efficient JSON parsing and optimized UI/UX for seamless browsing and venue detail exploration.

Academic GPA Tool

Stack: Mobile App Development, Local Storage, State Management, Responsive UI

- Developed a high-precision academic utility using Room Database for local data persistence. Engineered complex logic to calculate weighted GPA averages, ensuring data integrity and user-friendly reporting.

Health BMI Tracker

Stack: Mobile App Development, Local Storage, State Management, Responsive UI

- Created a health-focused application using Kotlin and persistent local storage. Implemented automated BMI calculation logic with categorization algorithms and custom UI inputs for a streamlined health-tracking experience.
